Configuring Node port

service.yaml

```yaml
apiVersion: v1
kind: Service
metadata:
 name: my-app
 namespace: default
spec:
 type: NodePort  # Ensures external access via a specific port
 selector:
   app: my-app
 ports:
  - protocol: TCP
    port: 80      # Service port inside the cluster
    targetPort: 80  # The container's port
    nodePort: 30391   # Externally accessible port
```
